

## **Guidelines for Project 2 Presentations:**

First read the General Presentation Guidelines document.

All of the teams presenting this project should focus on conveying their general approach to modeling a multi-channel infusion pump. Specific things that you might want to address are

- What features do you plan to model? Why?
- How do you plan on using promotion to scale up from a single-channel pump to one with multiple channels?
- What are the difficult issues to handle, and how are you planning on addressing them?
