General Guidelines for Project Presentations:

1. The purpose of a presentation is to provide guidance to the rest of the class on the project, highlighting important issues to pay attention to, problematic areas, etc.
2. Each team should plan on spending no more than 15 minutes for their presentation. This includes questions! So don't include more than 10 minutes of content in order to allow for interaction with the class.
3. The presentation should be professional and polished, but don't spend a huge amount of time on slide formatting and surface details. We strongly suggest that you practice the presentation at least once before giving it to the class.
4. The presentation will not be graded, although particularly poor performance may reflect on the "instructors' discretion" part of the grade.
